

MIDWEST OPTICAL - FILTER - NEUTRAL DENSITY ND060 / NI060

F/ND060-C

Filter - Neutral density 60nm, for C-Mount

- Neutral density, OD = 0.6 T = 25%
- Working range from 400-700 nm
- Reduces light intensity

Product description

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter

Specifications

Filter thread (thread diameter x pitch)	C-Mount
