

## MIDWEST OPTICAL - FILTER - NEUTRAL DENSITY ND090 / NI090

F/ND090-C

Filter - Neutral density 90nm, for C-Mount

- Neutral density, OD = 0.9 T = 12.5%
- Work area from 400-700 nm
- Reduces light intensity

### Product description

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter

### Specifications

<b>Filter thread (thread diameter x pitch)</b>	C-Mount
