

## MIDWEST OPTICAL - FILTER - NEUTRAL DENSITY ND120 / NI120

F/ND120-C

Filter - Neutral density 120nm, for C

- Neutral density, OD = 1.2 T = 6.255%
- Work area from 400-700 nm
- Reduces light intensity

### Product description

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter

### Specifications

**Filter thread (thread diameter x pitch)**

C-Mount
